EMBEDDED REPORTING

Pixel-perfect reports, inside your application

Embed a report viewer and designer in your web application, so users view, filter, export and print reports without leaving your product.

Overview

Bold Reports is a complete RDL reporting platform. Design, embed, schedule and distribute paginated reports, including the SSRS and Crystal reports you already have. Ready-made components, REST APIs and SDKs replace a home-grown reporting stack, and existing **.rdl** and **.rdlc** files open natively.

What is included

Report Viewer
Embeddable viewer with parameters, drill-down, drill-through, hyperlinks and export.

Report Designer
A web designer you can embed, plus a standalone Report Designer for Windows.

Report Server
Manage, secure, schedule and share reports. Included in every edition, with no separate license.

Report Writer
Create and export reports from code (PDF, Word, Excel) without the viewer.

REST APIs and SDKs
Embed with framework components, a secure token-based iframe URL, or the REST API.

Why embed reports

Faster decisions
Reports render directly inside your application UI, next to the work they support.

Better user experience
Users reach their data without leaving your product or learning another tool.

Current data
Reports connect to live data sources and show the data at the time they run.

Less development effort
Ready-made components and APIs replace building and maintaining a reporting stack.

Crystal Reports to SSRS Converter
Our free converter turns Crystal .rpt files into .rdl reports that open in Bold Reports, with reduced manual work and no rebuild from scratch.

AT A GLANCE

REPORT FORMATS
RDL and RDLC, the formats SSRS uses

EMBEDDING SDKS
JavaScript, Angular, React, Blazor, ASP.NET Core

DATA CONNECTORS
25+, including SQL Server, Oracle, PostgreSQL, Snowflake and REST

EXPORT FORMATS
7: PDF, Excel, Word, PowerPoint, CSV, XML, HTML

EDITIONS
Cloud and On-Premises, both with the full platform

DEVELOPERS
Unlimited in every edition

Key features

Multi-framework embedding
Components for JavaScript, Angular, React, Blazor (Server and WebAssembly) and ASP.NET Core. The designer and the viewer can both be embedded.

SSRS-compatible RDL and RDLC
Existing reports are reused without conversion. RDL output is fully compatible with Business Central (RDLC).

Multi-tenancy
Tenants are isolated on one deployment, with role-based access control and tenant-management APIs.

White-labeling
Apply your own themes, colors and logos so reports match your product.

Scheduling and delivery
A built-in scheduler delivers reports by email at the intervals you set.

25+ data connectors
SQL Server, Oracle, PostgreSQL, MySQL, Snowflake, BigQuery, Redshift, MongoDB, OData, REST Web API, JSON, CSV and Excel.

7 export formats
PDF, Excel, Word, PowerPoint, CSV, XML and HTML, with layouts preserved for print.

Localization
The designer and viewer support multiple cultures, including Arabic, French, Hebrew, Japanese, Portuguese, Russian and Chinese.

Resources and support
