SECURITY AND COMPLIANCE

Secure reporting, built into every deployment

Bold Reports is a complete RDL reporting platform. Encryption, access control and event logging apply the same way on Cloud and On-Premises, so moving between them never means re-architecting your security.

A security layer at every point in the request path

Authentication

Local credentials, LDAP, Azure ADFS, OpenID Connect or OAuth 2.0. Use your existing identity provider for single sign-on.

Authorization

Read, write, create and delete permissions, set separately per report, data source and dataset.

Data security

Per-site isolation keeps each site's users, sources and reports invisible to other sites. Row-level security limits each user or group to their rows.

Application security

Unique per-installation keys encrypt stored passwords and connection details, using Rijndael and RSA.

Network security

TLS 1.2 or later (1.3 ready), recommended end to end from browser to server to database.

Encryption

AES-256 protects data at rest and in transit.

Access control in every edition

Single sign-on

Sign in through your existing identity provider instead of a separate login.

Role-based access

Decide which reports, data sources and datasets each person can reach.

Row-level security

One report serves many audiences; each user or group sees only their rows.

Site isolation

Multi-site deployments keep each site's users, sources and reports separate.

AT A GLANCE

AUDITS
SOC 2 Type 2, independently audited annually

PRIVACY
GDPR compliant; supports HIPAA compliance requirements

PUBLIC SECTOR
TX-RAMP Level 2 certification

ENCRYPTION
AES-256 at rest and in transit; TLS 1.2+

ACCESS
SSO, role-based access and row-level security in every edition

MONITORING
24/7 infrastructure monitoring

The same standard, whichever way you deploy

	CLOUD	ON-PREMISES
Infrastructure	Operated by Bold Reports in managed regions	Your servers: Windows, Linux, Docker or Kubernetes
Platform and controls	Identical across editions	Identical across editions
Encryption keys	Hardware security module, or bring your own key	Customer-held
Data residency	Bold Reports-hosted	Your infrastructure only, air-gap capable

More protections

Data sovereignty
Host On-Premises in your own data center or cloud. No third party, including Syncfusion, can access your information.

24/7 monitoring
The application and its infrastructure are monitored around the clock. Live status and incident history at status.boldreports.com.

Event logging
The server logs application events and errors, which our support team uses to investigate reported issues.

Payment security
Billing runs through Stripe, a PCI-compliant processor; card details are entered with and processed by Stripe.

FOR YOUR COMPLIANCE TEAM

Overviews and forms in the Bold Reports legal center:
